Subject: Portland Harbor Superfund input

Hello,

I want to provide my input to this process and have been aware of the section of the Willamette River affected from long term pollution which has resulted in a long standing advisory to not consume any fish from the river.

My key inputs to the EPA with regard to the plan is as follows:

1. The cleanup plan should include a verifiable viable path to remove the fish consumption advisory as an outcome so that the city residents can have confidence in the water quality in the Willamette River.
2. The companies who were party to polluting the river should be held accountable to fund the complete recovery to their culpable fair share, and not be allowed to apply reduction methods to limit their financial responsibilities to remove the damage done, at the expense of tax payers or others, or to an end that that does not meet the desired outcome.
3. The reduced amount of sediment in the draft plan is far short of what needs to be removed to assure the pollution is removed and to reach the outcome to ensure the fish advisory is removed with margin in my opinion for the public.
4. Building on item 1, I don't like the time and exposure that will occur, and continued river pollution that would come from planning on natural dispersion of pollutants to let it reduce to meet the goal over time.

Thank You,

(b) (6)

Resident of the greater Portland metro area and will not fish anywhere in the city waterways for risk of consuming pollutants from any linger or resident fish.
